
We are searching for a **"Software Engineer - Team Leader"**

ABOUT MY EVOLUTION

MY Evolution is the first M2M Connectivity & IoT Services Provider, delivering Asian markets since 2009. We are a licensed Telecommunications Service Operator and as well as a Solution Provider for IoT.

SUMMARY

You are a technical hands-on Software Engineer with proven management capabilities, and you want to join a leading IoT start-up as a Team Leader.

You are familiar with mentoring developers in various technologies and environments such as (full-stack technologies, databases, Web application, IoT platform, mobile applications, API Systems...).

We are looking for talented profiles to join our teams in Kuala Lumpur.

REQUIREMENTS

Your background:

- At least 5 years of recent hands-on development – preferably in wide range of technologies frameworks, and languages so you can appreciate the similarities and uniqueness of software tooling and processes within the enterprise
- Well-versed in Agile and preferable experience in software development workflows across a range of teams sizes
- Hands-on experience and good understanding of modern architectural patterns including services, containers, and reusable frameworks
- We are going to be trying a lot of new products – you are going to need to be handy with figuring out installation, configuration, and generally getting vendor products working within the constraints of our environment. It will be very handy to have good scripting skills and a strong eye for data quality, etc.
- Computer Science or Software Engineering degree
- Experience in Telecommunications is a plus

Project/Program Management skills:

- Detail-oriented, able to follow through and sweat the small stuff when it matters
- At the same time, when needed, able to mentally zoom-out from the details to see the big picture, understanding that we have to serve multiple stakeholders, and be able to explain and manage rationale for tradeoffs
- Comfortable juggling multiple tasks and keep overall program moving in the right direction – comfortable in an environment with evolving priorities
- Get delivery done especially depending on contributions from multiple partner teams – being able to get tasks accomplished even when you don't have direct control of resources is going to be a key ask for this role

TECHNICAL SKILLS

- JAVA, C#, Python, PHP, PL/SQL, Bash/Powershell, HTML5/CSS3, Javascript, JQuery
- Spring, Hibernate, JSP, Web service (Restfull, SOAP) JBoss
- Data Technology : DOM, xslt, dtd, json, XML
- Linux, Unix
- MySQL, Oracle, Postgres, MongoDB
- SCRUM, UML, SVN, GIT

HOW TO APPLY?
